DESIGN ①

My nametag's design is based off the head of a Canadian Goose. As a Waterloo student, I found it amusing how the geese were basically our unofficial school mascots. I encounter geese everywhere around campus, and I fell in love with them. I've recently been trying to design and create as many geese related products as possible, and my nametag was no exception to my newfound fun.

<https://www.audubon.org/field-guide/bird/canada-goose>

I initially wanted to have the goose's white head accent to be fully engraved, but I realized that I would go over the limit of ratio of engraved area that way. So I decided to put my initials inside it instead.

All the curves were very challenging, but it was very fun to navigate around the SolveSpace program itself!

At first, I had decided to make the geese so that it would contain mostly geometric shapes; however, I decided to challenge myself after searching for photos of Canada Geese. The picture on the left was my reference for my nametag design. I really liked the curve of the neck on this goose, and wanted to recreate it on the nametag.
